EXPERIENCE

Web Developer Freelancer

10/2018 – Present

Belgrade, Serbia

Achievements/Tasks

- I have developed several Web API's as my personal projects. These include Multi-page Dynamic API's with server-side rendering of html views and REST API's using JSON format to transfer data to FE.
- Developed module-wise API's using MVC design pattern.
- Developed database interaction code using MongoDB.
- Enabled client-side and server-side security validations for all API's.
- Developed user interfaces using HTML, CSS, Bootstrap4.
- Enabled Rendering views (HTML pages) using Express framework and EJS.

VSCode

PROFILE AT A GLANCE

Having 1 year experience in building various types of server-side Web API's

Developing Non-Blocking I/O Web Applications using Node.js in combination with MongoDB or MySQL databases

Developing Web Applications in MVC design architecture using Express and EJS or Pug template engines

Developing RESTful applications using both REST API interface and GraphQL query language

PERSONAL PROJECTS

CMS eCommerce Platform (2019) [↗](#)

- I have personally created this CMS platform all by myself in order enable potential clients to quickly build their own functional web stores to be immediately used as complex eCommerce Web API's.
- With this app customer is able to quickly sign up and build customized web-store by creating pages, visual identity, uploading products, uploading images, etc.
- This web-shop platform comes with essential features that every eCommerce website requires, such as a built-in shopping cart app, with support to online payments, ordering and sending informative emails to customers.
- Technologies used: Node.js, Express, MongoDB, Mongoose, EJS, Bootstrap, CSS, HTML.
